Resolution: 019/OCM/17 Approved 28 July 2017

PREFACE

This document presents a plan for recovering Senqu Municipality's critical systems to an operational state in the event of a disaster. The document is intended for proprietary use by Senqu Municipality.

The contents of this document must change to reflect business changes and environmental changes in the data center. All changes to the plan should be coordinated and dated to ensure that the most current information is referenced during a test or recovery process.

All employees should be made aware that they are to notify a member of the Disaster Operations Team immediately upon noticing any activity or occurrence that may be construed as a potential disaster. The plan will be invoked when the Senqu data center is rendered inoperative or can no longer support the processes vital to day-to-day operations, resulting in a disaster declaration by a member of the Disaster Operations Team.

This document is the property of Senqu Municipality. It contains proprietary and confidential municipal information and is for the use of Senqu Municipality employees only. Neither this plan nor its contents are to be copied or otherwise used, disclosed or disseminated to anyone outside Senqu Municipality. When revisions of the plan are distributed, prior versions should be destroyed.

- 1.2 Objective
- 1.3 Assumptions
- 1.4 Disaster Scenarios
- 1.5 Plan Strategy
- 1.6 Timeline
- 1.7 Plan Distribution

1.1 Scope

Organisation Name: Senqu Local Municipality

Head Office Location: The head-office incorporates the offices of

Municipal Manager, the offices of the Mayor, Corporate Services and Budget and Treasury including Information Technology. This building is the most critical as it is where the

core IT Systems are housed.

19 Murray Street

Lady Grey

Tel: (051) 603 1300/1301

Recovery Site 1: Tourism Tourism Office: This building is part of the

Office and Technical Senqu network and Cloud.

Building in Lady Grey: Cnr. Murray and Joubert Streets

Lady Grey

Tel.: 051 603 0048

Technical Building: This building incorporates the offices of the Technical Department, Corporate Services and Development Town and Planning Services (DTPS) and is part of

the Sengu network and Cloud.

Church Street (between Martin and Joubert

Streets previously the Old Age Home)

Lady Grey

Tel.: 051 603 1499 / 1452 / 1461

Recovery Site 2: Admin This building is used by the Cashier and **Offices Barkly East:** Debtors Clerk in Barkly East and is part of

the Sengu network and Cloud.

Corner of De Villiers and Molteno Streets

(Town Hall) **Barkly East**

Tel: (051) 603 1401 / 1402

Recovery Site 3 / Admin This building is used by the Cashier and

Offices Sterkspruit: Debtors Clerk in Sterkspruit and is part of the

Sengu network and Cloud.

79 Main Street

Sterkspruit

Tel: (051) 603 1404 / 1405

Effective Date: 1 July 2016

Environment: Physical and Virtual Servers (Network /

Application / Database / Backup)

Backup Media

Switches

Desktop Computers

Laptops

Printers

Scanners

Description: This plan encompasses the applications

> deemed critical as per the Business Impact Analysis (**Appendix A**) for the normal business functions of Sengu Municipality to

continue. It enables the IT Staff, with

assistance from Service Providers, to restore the core information systems in the event of a disaster.

It identifies substantial risk areas and exposure to disaster and assists to reduce these risks.

1.2 Objective

It is essential to have a disaster recovery plan to provide for the recovery of those systems which support critical business functions and/or processes. The objective of this Disaster Recovery Plan is to provide a structure and an action plan to be used in the timely recovery of the Municipality's critical applications' processing environment. The critical applications were defined during the Business Impact Analysis stage and identified in the Business Impact Analysis Report (**Appendix A**). The objective of this Plan is to recover the critical applications' processing environment within 48 hours following a disaster.

1.3 Assumptions

Disaster Recovery Plans are based on a number of assumptions, which are critical to the proper execution and deployment of this plan. Following are these assumptions:

- Processes and controls are in place to ensure adequate recoverable back-ups of system, application and data files for those systems to be recovered;
- All data is properly backed-up on a timely basis and stored at an offsite location;
- The Recovery Site data center, located at Lady Grey or alternatively at Barkly East and as a third option, Sterkspruit, is unaffected by a disruption which effects the Lady Grey data center;
- Key personnel and/or their alternates, as identified within the plan, understand their identified roles and are available to participate in the recovery process;
- Knowledgeable personnel are available to perform specific technical procedures during restoration and recovery;
- Copies of the Disaster Recovery Plan are appropriately distributed and properly stored at off-site locations;
- The Plan is maintained and tested on an ongoing basis;
- The declared disaster falls within the disaster criteria defined in the Disaster Recovery Plan; and
- Emergency evacuation procedures exist to ensure the safety of the employees.

1.4 Disaster Scenarios

An analysis of risks has been completed, identifying the following disaster scenarios that this plan will address:

Scenario One - "Smoking Hole"

This scenario assumes loss of applications and loss of facilities:

- Loss of facility--the building you currently work in is unavailable, but other SENQU locations are unaffected.
- Loss of all applications / systems until recovered at one of the data centers.
- Distributed System 2 to 8 days
- Loss of data up to one day (24 hours).
- Loss of telecommunications for up to 48 hours (i.e., phones, fax, email, internet access).
- Personnel needed to enact the Business Continuity Plan are available and can respond to the disaster.
- Paper files stored within the building are destroyed.

Scenario Two - "Building OK, No Systems"

The second situation is a less severe variation of the first. It includes the following:

- The facilities at the location where you work are available
- Loss of all applications / systems until recovered at one of the data centers
- Distributed System 2 to 8 days
- Loss of data up to one day (24 hours).
- Personnel needed to enact the Business Continuity Plan are available and can respond to the disaster.

Phones are available; Internet and Email are unavailable for 2-8 days.

Scenario Three - "Systems OK, No Building"

Conversely, the third situation stipulates that:

- The systems and applications are available
- The facilities where you currently work are not available, but other SENQU locations are unaffected.
- There is no access to workspace, files and other resources
- Internet and email are available. Phones outside the building are working.
- Paper files stored within the building are destroyed.

Scenario Four – "Third Party Out"

The fourth situation assumes:

- Loss of a critical third party relationship
- SENQU facilities, communications, applications and connectivity are working.

1.5 Plan Strategy

In the current environment, the Sebata Cloud Server has a communication link to the SENQU frame relay network. Back-up media drives should be created and stored off-site at a secure site specified by the Senqu Municipality. In a disaster scenario, the Disaster Operations Teams relocates to a temporary Command Center to organise the recovery effort, and the other Teams relocate to the recovery site, where a communication link is established from recovery site to the SENQU frame relay network. Links are also established from recovery site to the business partner locations. Back-up media drives should be shipped from the secure site to the recovery site, where the Recovery Teams restore the critical environment.

1.6 Timeline

Systems will be restored within a period of 36 to 96 hours.

1.7 Plan Distribution

All members of the Disaster teams (Appendix D) must have copies of this Disaster Recovery Plan. Additional hard copies are kept at the off-site backup location as well as in the safes in the Cashiers offices in Barkly East and Sterkspruit.

2. CURRENT BACK-UP STRATEGIES

A significant factor for successful recovery of business operations is having secure copies of computer applications, data, system software and documentation. The applications deemed critical in the Business Impact Overview, with their related application software, system software and data, need to be appropriately backed-up. The back-up media drives, any critical documentation, and the catalogue describing what each back-up media drive contains must be stored in a secure, off-site location. The back-up media drives must be labeled in an organised manner and logged so that determination of the relevant media drives necessary for restoration of the critical applications is a straightforward process. Following is the current methodology for creating back-up media drives.

Refer to the Senqu Backup, Recovery and Retention Policy

3. DISASTER DECLARATION PROCESS

- 3.1 Disaster Operations Team Members and Tasks
- 3.2 Review Disaster Criteria
- 3.3 Assess Damage
- 3.4 Declare the Disaster
- 3.5 Notify Key Personnel
- 3.6 Assemble at the Command Center
- 3.7 Oversee Recovery Process

3.1 Disaster Operations Team Members and Tasks

Team Purpose

The Disaster Operations Team is responsible for evaluating a potential disaster situation, declaring a disaster if necessary, and overseeing the recovery process. The team will direct the recovery process from the designated Command Center, and may also be actively performing recovery tasks. Any individual member of this team is authorised to declare a disaster, but if two or more team members are available, the members should consult before declaring the disaster.

Team Members

Refer to **Appendix D** – Disaster Teams

Team Tasks

The Disaster Operations Team Leader must be informed when a crisis occurs. The Team is immediately convened to perform the below tasks as they are defined on the following pages.

- ⇒ Review Disaster Criteria (section 3.2)
- ⇒ Assess Damage (section 3.3)
- ⇒ Declare the Disaster (section 3.4)
- ⇒ Notify Key Personnel (section 3.5)
- ⇒ Assemble at the Command Center (section 3.6)
- ⇒ Oversee Recovery Process (section 3.7)

3.2 Review Disaster Criteria

Disaster criteria are to be used by the Disaster Operations Team to determine whether the Disaster Recovery Plan will be invoked or if normal operations will continue in a modified format. The disaster criteria are associated with the recovery time frames identified in the Business Impact Overview. If any one of the following criteria is met, a disaster will be declared.

Time: The inability to process information at the Sengu Municipal

Building situated in Lady Grey is for a period greater than:

24 Hours

Facility: Destruction, limited access, or disruptive occurrence to:

Server Room

Corporate Services/Finance Building

Communications: Voice and/or data communications interfacing with the critical

applications' environment are inoperable for a period greater

than:

24 Hours

Staff Disruption: Unavailability of key personnel required to perform core

business functions for more than:

24 Hours

3.3 Assess Damage

The Disaster Operations Team is responsible for making a preliminary assessment of the below areas to determine if significant damage has occurred. The extent of the damage to any one of these areas should be evaluated against the recovery window. Damage which interrupts operations for a period less than the recovery window does not justify a disaster declaration. However, any damage posing an interruption of services in excess of 24 hours will warrant a disaster declaration.

The Disaster Operations Team, with input from other groups, will assess the damage to the below areas and decide whether the Disaster Recovery Plan should be invoked, based on the disaster criteria defined earlier.

• Facilities Lady Grey Head Office Building

• Human Resources Key employees

• **Utilities** Electric, telecommunications, water etc.

Software & Applications Acronis, FMS, Windows and Exchange

MS Exchange software (Part of the backup), EFT

Servers
 Backup Server, BDC, CW-Server, EDMS, Exchange, MGMT, MIS-Server, NVR, PDC, SEB-SQL, SENAPP, WSUS (See Appendix M for full information/specifications of these servers)

There may be situations where the extent of the damage and/or time necessary to repair this damage is unclear. In these situations, the Disaster Operations Team needs to evaluate the situation conservatively with a focus on minimizing risk to the businesses that would be impacted. When it is not clear whether or not a situation meets the disaster criteria, assume the worst and prepare for a disaster.

3.4 Declare the Disaster

If a disaster is declared by the Disaster Operations Team, recovery operations will be set in motion immediately. The Disaster Operations Team will direct operations from the Command Center. (See Section 3.6 for further discussion regarding the Command Center.) Below is an overview of the tasks to be performed by the Disaster Operations Team once determination has been made that a disaster exists.

Disaster Operations Team Leader calls:

- ◆ Emergency & Rescue contacts (i.e., facilities, fire, police, ambulance, utilities). (**Appendix F**)
- Preferred Recovery Site Lady Grey or Barkly East or Sterkspruit -(Appendix B).
- ◆ Other Senior Management. (Appendix E)
- ♦ Human Resources (Appendix E)
- ◆ Other Teams (**Appendix D**)

Public Affairs Statement

The Disaster Operations Team Leader will call upon the required Human Resources for assistance. All inquiries by external parties should be directed to the designated Public Affairs spokesperson. This is generally the Municipal Manager with the assistance of the Director: Corporate & Support Services.

A public relations statement intending to reassure customers, suppliers, and the general public of the preparedness of Municipality should be released immediately following a disaster.

The media statement will be presented by the Public Affairs spokesperson, which should be the single point of contact to ensure consistent communication with the public. Further press releases should be broadcast accordingly. No statements, formal or otherwise, are to be made to any group, including, but not restricted to: agency, employees, organisation, customer, government department, vendor, regarding the nature or implication, of the disaster, nor the steps being taken for recovery unless they are made through the Public Affairs spokesperson.

3.5 Notify Key Personnel

Following disaster declaration, the Disaster Operations Team will follow a sequence of notification as organized in a tree structure. It is the DR Operations Team Leader's responsibility to notify his/her team members, and the Infrastructure Recovery and Application Test Team Leaders. The following illustrates the sequence of communications:

Disaster Operations Team Leader

- ⇒ Disaster Operations Team Members
- ⇒ Infrastructure Recovery Team and Application Test Team Leaders/Alternates
- ⇒ Emergency Contacts (Appendix F Fire, Police, Ambulance)
- ⇒ Staff (Appendix E)

3.6 Assemble at the Command Center

The Disaster Operations Team Leader must first determine whether or not it is necessary and/or physically possible to locate all team members at one location, and at what specific location.

The Command Center is a designated location to be used as a headquarters for the Disaster Operations Team to congregate, and will be used as a preliminary staging area for employees awaiting further instruction from their Recovery Team Leaders.

The following location has been designated as the Command Center:

Primary Command Center:

Technical Services Building Church Street (Between Martin & Joubert Streets) Lady Grey

Tel: (051) 603 1499 / 1452 / 1461

Secondary Command Center:

Barkly East Senqu Municipal Offices

Town Hall

Corner of De Villiers and Molteno Streets

Barkly East

Phone number(s): 051 603 1401 / 1402

Alternate Command Center*:

Sterkspruit Municipal Building

79 Main Street

Sterkspruit

Phone number(s): 051 603 1404 / 1405

* The Secondary or Alternate Command Center is to be used in the event of a geographically widespread disaster or due to extenuating circumstances that do not allow for access to and/or use of the Primary Command Center. The command center should be isolated from the disaster site and allow personnel to be accessible. The site should contain phones, and conference calling capabilities.

3.7 Oversee Recovery Process

Recovery Disbursements

Since a disaster situation is not within the ordinary course of business, certain non-standard expenditures may require expedited management authorization. Separate general ledger accounts should be dedicated to disaster recovery to allow for contingency funds and keep costs segregated. Fund releases can be done by the Municipal Manager or the CFO if the Municipal Manager is not available or a Delegated Official in the case where the Municipal Manager and the CFO are not available.

Primary Site

The Disaster Operations team is responsible for initiating the process of restoring the original or establishing a new primary recovery site. After the task of managing the recovery process has been delegated to the Disaster Operations Team, the Disaster Operations Team needs to address business resumption issues. The Team should lead the following activities:

- Assessment of damage to the original site and determination whether the building is salvageable;
- If building is salvageable, initiate repairs; if building is not salvageable, start investigating relocation options;
- · Investigation of other relocation options; and
- Discussion of relocation efforts with Technical Services Management

4. RECOVERY COORDINATION

- 4.1 Disaster Operations Team Members and Tasks
- 4.2 Notify and Assemble Infrastructure Recovery and Application Test Team Leaders
- 4.3 Establish Infrastructure at RECOVERY SITE
- 4.4 Coordinate Administrative Business Support Services

NOTE: Team Leaders for ALL TEAMS are responsible for identifying and developing the detailed procedures necessary to accomplish the team's recovery responsibilities as defined in this plan. These procedures need to be prepared at the level of detail defined by the Team Leader as necessary to minimize confusion and facilitate smooth recovery during a disaster situation. In addition, Team Leaders are responsible for maintaining these recovery procedures and updating the Disaster Recovery Plan to ensure that the team members and recovery procedures reflect the current Municipal environment and requirements.

4.1 Disaster Operations Team Members and Tasks

Team Purpose

The Disaster Coordination Team (Appendix D) is responsible for orchestrating the entire recovery effort. The team will coordinate and manage all aspects of the recovery process from the designated command center and RECOVERY SITE.

Team Members (Appendix D)

Team Tasks

- ⇒ Notify and Assemble Infrastructure Recovery and Application Test Team Leaders & Alternates
- ⇒ Initiate Retrieval of Back-up Media from the off-site storage area (See Appendix O)
- ⇒ Relocate to RECOVERY SITE
- ⇒ Establish Infrastructure at RECOVERY SITE

⇒ Coordinate Administrative Business Support Services

It is the responsibility of the Disaster Operations Team to manage and orchestrate the recovery process. The above tasks are further discussed in the following pages. At the end of the recovery process, it is the responsibility of this team to shut-down recovery operations at RECOVERY SITE and re-initiate data center activities at the primary site. Testing must be performed during every stage of recovery.

4.2 Notify and Assemble Infrastructure Recovery and Application Test Team Leaders

The Disaster Operations Team Leader (with assistance from the Alternate) is responsible for notifying the Infrastructure Recovery and Application Test Team Leaders. In turn, each Infrastructure Recovery and Application Test Team Leader is responsible for notifying and assembling the respective Team Members who are expected to participate in recovery process.

Disaster Operations Team Leader

- ⇒ Infrastructure Recovery Team Leader/Alternate
 - ⇒ Infrastructure Recovery Team Members
- ⇒ Application Test Team Leaders/Alternate
 - ⇒ Application Test Team Members

The Infrastructure Recovery and Application Test Team Members will relocate to the RECOVERY SITE in the event of a disaster. The most suitable RECOVERY SITE will be identified and a copy of the RECOVERY SITE directions will be given at the time of the disaster.

Recovery Site Options and Details: See Addendum B
Recovery Site Directions and Maps: See Addendum C

Notification Checklist

When notified by the Disaster Operations team that the Disaster Recovery Plan has been activated, the Infrastructure Recovery Team and Application Test team leaders or alternates should record the following information that will be passed along to department personnel:

| 1. | Brief description of the problem: |
|----|---|
| | |
| 2. | Location of the Disaster Operations Center, if the main facility cannot be entered: |
| | |

| 3. | Phone number to contact the Disaster Operations | s Center: | | |
|----|---|-----------|--------|--|
| 4. | Any crises / immediate support requested by the Disaster Operations Team: | | | |
| 5. | Whether or not the facility can be entered: | Yes () | No () | |

Notification Procedure

The team leader, alternate or assigned individual, upon activation of the Disaster Recovery Plan, will contact team personnel using the following procedure:

During notifications of an alert or declared disaster, use this procedure to alert all personnel. Read the procedures thoroughly prior to making a call. By using the following instructions, you will not unnecessarily alarm family members of an employee who was working at the affected site at the time of the disaster.

Place phone call and say, May I speak with (individual)?

- 1. If available, provide the information you called to convey.
 - Remind the person to make no public statements about the situation.
 - Remind the person not to call co-workers (unless instructed to) and to advise their family not to call other employees.
 - Record the information in the contact status column.
- 2. If not available, say, "Where may I reach (individual)?"
 - If at any location other than the data center, get the phone number. Call the other location and provide the information you wanted to convey.
 - If the individual was working at the affected site, indicate that you will reach the individual there. DO NOT discuss the disaster with the person answering the phone.
 - Immediately notify the Disaster Operations Center.
 - Record the information in the contact status column.

- 3. If contact is made with an answering machine: Make no statement regarding the situation.
 - Provide the phone number to call at Disaster Operations Center; ask that the employee make contact at that number as soon as possible.
 - Record the information in the contact status column.

4. If no answer:

- Record the information in the contact status column.
- 5. If no answer and the individual has a cell phone:
 - Place a call or send sms to the cell number.
 - Enter the number of the Disaster Operations Center for the individual to call.
 - Record the information in the contact status column.

Notification Call List

Using the team member contact list in **Appendix D**, the team leader, alternate or assigned individual should convey the following information when contacting the team personnel:

- Brief description of the problem.
- Location of the Disaster Operations Center and / or the Business Recovery
 Site
- Phone number of the Disaster Operations Center.
- Immediate actions to be taken.
- Whether or not the facility can be entered.
- Location and time the team should meet.
- Reminder to all team, carry photo identification with them at all times and be prepared to show it to security or local authorities.
- Instruct everyone notified not to make any statements to the media.

All callers should record status of everyone they call, noting the time the call was placed and whether the person was contacted. Make a reasonable number of attempts if the phone was busy or there was no answer. Forward the completed list to the Disaster Operations Centre and the staff will continue to attempt to contact team members.

4.3 Establish Infrastructure at RECOVERY SITE

The Municipal ICT infrastructure will be established at the Recovery Site. The necessary equipment will be procured and commissioned as per Infrastructure Recovery and Application Test Procedures.

Please see Section 6: Infrastructure Recovery Teams and Tasks for minimum system requirements for setup at the recovery site.

4.4 Coordinate Administrative Business Support Services

The Disaster Operations Team is responsible for addressing all administrative business support services. Below are the significant administrative concerns to be addressed. Contact references for each administrative area are included in the relevant Appendix of this document.

The Central Supplier Database must be used to source goods or services, unless Service Level Agreements with suppliers of specific goods or services

Confidential

exist.

Temporary Services

Additional staff resources to perform administrative disaster recovery tasks

may be required to help support the recovery process, since the duration of

the process is limited.

Mail & Courier

External and inter-office mail must be re-routed to the alternate recovery

location. Internal and commercial mail courier services are to be used to re-

direct all mail to the relocation site.

Hotel Accommodations

Hotel reservations near RECOVERY SITE must be made for staff who are

unable to commute between their homes and the recovery site. The

appointed Travel agent must arrange this accommodation. See Appendix H.

Travel & Transportation Arrangements

The Central Supplier Database must be used to find a supplier who can

provide either ground or air transport to the recovery location. This will

depend upon the location of the recovery site and the severity of the disaster.

The Disaster Operations Team may decide to establish a separate Administration

Team depending upon the extent of these tasks. This decision is to be made at the

discretion of the Team at the time of the disaster.

5. PLAN TESTING AND MAINTENANCE

5.1 Plan Testing Procedures

5.2 Plan Maintenance Coordination

5.1 Plan Testing Procedures

Purpose

Testing must be conducted on a bi annual basis to verify that the Disaster Recovery Plan can be used to recover the Municipality's critical applications/processes after they have been disrupted. These tests may be -37-

either in the form of Operations Tests or Structured Walk-Through Tests. The overall objectives of plan testing are to validate that the information is current and accurate and to discover and remedy any inadequacies. Results of plan testing will be an updated DR plan and maintenance procedures for ongoing use. To achieve these objectives, tasks should be coordinated by the DR Coordinator concentrating on the following activities:

- Affirm that the strategy documented in the plan is viable;
- Verify that the recovery requirements specified are comprehensive;
- Test the usefulness of the plan as it is currently structured;
- Educate team members in the necessary recovery tasks;
- Develop team members' familiarity with reactions during crisis situations;
- Develop plan testing procedures for ongoing use;
- Revise the plan where inadequacies or errors are discovered; and
- Develop plan maintenance procedures for ongoing use.

Definition of an Operations Test

An operations test involves performing actual steps contained in the Disaster Recovery Plan to demonstrate recovery of systems included in the plan. The test may involve restoration of the entire system and processing of test transactions, or recovery of one or more individual components. Since this type of test requires actual recovery of files from backup media, (just as would occur in a disaster) it must be performed in "real time". For the recovery of larger systems, a substantial time commitment may be required.

Definition of a Structured Walk-Through Test

A structured walk-through is a paper evaluation of a Disaster Recovery Plan designed to expose errors or omissions without incurring the level of planning and expenses associated with the execution of a full operations test. The structured walk-through is, in effect, a role play of a "disaster" scenario that commences within the confines and safety of a conference room.

Develop Testing Scripts for the Disaster Recovery Plan

Disaster Recovery Plan tests have been developed for all tasks involved in recovering critical applications/processes. The overall purpose of testing is to determine whether the plan procedures work in the recovery of critical applications/processes. Testing will also assist in:

- Determining plan efficiency;
- Providing a measure of system performance during recovery operations; and
- Educating key personnel on their responsibilities in a disaster.

Each aspect of the Disaster Recovery Plan should be tested singularly and as part of the whole recovery process.

Refer to **Appendix O** to Restore Servers and Services.

Conduct and Evaluate Tests

Disaster Recovery Plan tests should be conducted with a number of participants each assigned specific roles. The Disaster Operations Team should be responsible for the coordination and supervision of all plan testing. The Test Leader should be the point of contact for all Municipality personnel with respect to plan testing to ensure continuity of responsibility in ongoing testing. The test results should be compared against the predefined test objectives. This comparison will highlight problem areas and the efficiency of tasks.

Testing of the Disaster Recovery Plan is an ongoing process due to the changing nature of the Municipality and corresponding changes in the Disaster Recovery Plan. Procedures to ensure adequate testing of the Disaster Recovery Plan are necessary. The Disaster Operations Team Leader should be involved in the preparation of all on going testing information.

1. Determine the tests to be conducted.

Determine which facets of the Disaster Recovery Plan are to be conducted on a regular basis. List the individual tests to be conducted during the year, including the types of testing that should be performed (walkthrough, partial test off-site, full off-site test, etc.) This should include at least one off-site test.

2. Determine the frequency of tests to be conducted.

It is most important to test dynamic procedures and the procedures that are deemed critical to the success of the recovery process. Determine how often each individual test should be conducted.

3. Prepare regular testing schedule.

The Disaster Operations Team should devise a testing schedule for the year. Time should also be allotted for additional testing which may be added on an ad hoc basis.

4. Notify personnel involved in test schedule.

For each test to be conducted, notify all participants of the time, place and expected length of the test.

5. Conduct and document tests.

A record of any deviations from the Disaster Recovery Plan procedures during the test should be maintained. A disaster operations team member must document the tests conducted and a brief overview of the results.

Record Test Results

To ensure the accuracy and completeness of the test results, the Disaster Operations Team should designate a member as the Test Recorder. The responsibility of the Test Recorder is to record key issues at the test and prepare the test report. Procedures for proper documentation and evaluation are necessary.

1. Document compliance with test criteria.

Compare the test results with the test criteria. This comparison will highlight problem areas and the efficiency of procedures. All recovery processes included in the Disaster Recovery Plan should be followed exactly. Any deviation must be noted.

2. Conduct participant group discussion regarding tests.

In evaluating the test results, the participants should be involved in a group discussion session. This can both provide feedback on the practicality of the Disaster Recovery Plan procedures and provide valuable input from those who have detailed knowledge of the tasks to be completed.

3. Discuss the test results with management.

The results of the Disaster Recovery Plan tests should be discussed with senior management, and agreement reached about any changes that need to be made to the Plan.

4. Document any necessary plan alterations.

Document any necessary plan alterations arising from the test evaluation.

5. File all test results.

File all test documentation. This is useful during audits to indicate Disaster Recovery Plan testing has been completed. Some evidence that any required alterations have been made should also be included.

6. Discuss and confirm the ongoing plan testing procedures.

Testing would typically be conducted on an annual basis. The contrived scenario below could be viewed as a trigger for the testing of the DRP Plans using a full off site operational test approach:

"A small electrical fire breaks out in the kitchen area (originating from a frayed wire of a coffee maker left on overnight) on the ground floor of the Senqu head office in Lady Grey. The fire quickly escalates out of control consuming most of the building structure. Firefighters arrive at the scene, eventually extinguishing the blaze, then declaring the building off-limits. There is tremendous damage to the head office, with the entire interior burned (contents unsalvageable) and effects visible from the outside. The structural integrity of the building is in question."

Using the scenario described above the following plan testing procedure / schedule can be developed to restore normal system process operations:

Scenario Plan Testing Procedure:

The success of the plan testing procedure based on the scenario described previously relies on various assumptions that are enumerated below:

Assumption 1: The Technical Building in Lady Grey is not affected by the disaster and is therefore the preferred recovery site.

Assumption 2: There is Wi-Fi communication from Lady Grey Technical Department to the Barkly East office and to the Sterkspruit office.

Assumption 3: The offsite backup facility has copies of all software kept at Lady Grey head office with the appropriate license keys and vendor contact information.

Assumption 4: The servers kept at the Lady Grey offsite backup facility are operational and adequate to run all the applications that were run at the Lady Grey head office.

Assumption 5: The offsite backup media are available to recover the business and application data. The Key contact for the backup media can deliver all the backup media safely to the recovery site. Alternatively, the offsite backups in Aliwal North needs to be transported safely to the recovery site and be connected to the network to recover the application data.

Assumption 6: The preferred Recovery Site is readily available to commence recovery operations and therefore has adequate space to accommodate the Lady Grey staff and the building has been opened for use. The telephones should be operational and all key contact information should be available at the Lady Grey Site.

Assumption 7: The IT Manager has a key to the recovery site server room.

Assumption 8: The IT Manager is available to enforce the required actions of the DRP i.e. IT Manager should be contactable, not injured in the fire.

Assumption 9: A testing contact for the other unaffected sites are available to confirm connectivity to the relocation site.

Bearing these assumptions in mind, the following testing script activities are defined:

Activity 1: Notify Internet Service Provider (Appendix G) and office staff at Senqu Municipality of the intention the run the DRP scenario. Include dates and times and ensure management's full buy in and cooperation.

Activity 2: Shut down the power feed to the VPN Router connected to Internet Service Provider's VPN line.

Activity 3: Shut down the Cloud Server.

Activity 4: Shut down all remaining IT equipment. The entire ICT infrastructure at the Lady Grey Head Office must now be offline and powered off.

Activity 5: The IT Manager notifies all of the DR team members that the DRP testing event has been activated.

Activity 6: The IT Manager notifies the relocation site to power up the standby servers.

Activity 7: The IT manager commutes to the relocation site.

Activity 8: The IT Manager arrives and unlocks the server room and checks that all the standby servers are operational.

Activity 9: The IT Manager should ensure that there is connectivity from the Technical Building to the Barkly East and Sterkspruit Offices. This can be achieved by contacting someone connected to the IT network in Sterkspruit, obtaining their IP address and then furthermore pinging the above mentioned IP address from one of the Barkly East servers to ensure confirmation of data packets sent. If the ping command is successful then connectivity between Barkly East and Sterkspruit has been confirmed.

Activity 10: Connect the **BackupServer**

Activity 11: Install all software not currently configured.

Activity 12: Restore all application data, server configuration settings and user data or System Image to the Virtual or Physical Server.

Activity 13: Notify the business regarding the restore point of the backup i.e. typically the last two weeks.

Areas for Special Testing Focus

Certain elements of the Disaster Recovery Plan require regular validation and maintenance. These elements are those most subject to change, and a structured approach to recurring validation/maintenance minimizes the risk associated with the Disaster Recovery Plan not reflecting current and valid information.

A recurring quarterly test interval should be established to identify and correct any non-current information reflected in these more dynamic plan elements. A complete list of the most dynamic plan elements needs to define up front, and each team leader must take responsibility for identifying those dynamic elements for which they are responsible. This list should include the following elements:

- Contact home phone numbers
- Contact work phone numbers and physical locations
- Hardware and Software inventory of equipment required for recovery
- Specifications of equipment that may be required for recovery. See Addendum M.

5.2 Plan Maintenance Coordination

Purpose

To ensure the Disaster Recovery Plan is kept current, the development of and changes to the DRP need to be:

- Properly identified
- Formally reviewed
- Accurately documented
- Authorized before being implemented.

This is accomplished by version numbering, maintenance windows, and approval by the DR Coordinator.

Small changes to the DRP often do not warrant a re-issue of the complete document. In these circumstances, document holders will be issued replacement pages, supported by an amendment notification form detailing changes and insertion points within the original document.

When significant document changes are warranted the DRP should be formally re-issued.

After the initial development of the DRP, maintenance of the document is completed by two methods: scheduled and unscheduled. Scheduled maintenance is essentially time-driven while unscheduled maintenance is event-driven.

Scheduled Maintenance

Periodic re-evaluations of the DRP should be conducted annually, or whenever changes occur within the current ICT environment or whenever

there are changes to the membership of the Disaster Operations Team, to ensure the DRP can be used effectively in an emergency. All sections of the plan should be reviewed during the re-evaluation to ensure that they are upto-date, complete and accurate. Should a plan review necessitate changes or updates, the DR Coordinator should be responsible for generating the changes and updates with the support staff as needed.

Unscheduled Maintenance

Certain revisions to the DRP cannot be scheduled and must occur on an as needed basis. Events that may require an unscheduled change include, but are not limited to the following:

- Operational environment changes
- Application changes/upgrades
- Hardware changes/upgrades
- Network architecture design changes
- Staffing changes
- Municipal changes

Refer to Figure 1: Plan Changes Notification and Distribution Procedures

One of the major sources of change will be in the way business activities are processed. This is difficult to link to any documentary chain to ensure that the Disaster Operations Team Leader is notified. Therefore, critical application/process owners must be made aware of the importance of informing the DR Coordinator of any changes regarding critical applications/processes. Define procedures for critical application/process owners to notify the Disaster Operations Team Leader when changes occur. Discuss these procedures with the department managers.

The disaster recovery plan should be reviewed at least annually by the disaster operations team leader or alternate and approved by the CFO once

Confidential

accepted as satisfactory.

The Disaster Operations Team Leader should review the Disaster Recovery

Plan regularly for any maintenance required. Requirements may have

changed as a result of the normal growth of the Municipality. Also, the

threats/risks to the Municipality may need to be reconsidered as a result

changes in the Municipality. Over time, the criticality of activities change and

consequently their priority in the Disaster Recovery Plan may also change.

It is important that the computer-based application and systems software

recovery procedures are reviewed on at least an annual basis to ensure any

changes to the system configuration have been incorporated.

Refer to Figure 2: Plan Maintenance Coordination

Terminated employees will be removed from the appropriate DRP team; i.e.,

their name will be removed from the DRP team. New hires will be added to

the appropriate DRP team as they come on board. This process helps to keep

the disaster teams current in the Municipal disaster recovery plan.

Refer to Figure 2: Plan Maintenance Coordination

Where a new application/process is identified it must be evaluated to

determine whether it is critical. If it is assessed as critical, it must be included

in the Disaster Recovery Plan.

The steps previously taken in the Business Impact Overview and Strategy

Selection Stages to identify critical applications/processes must be completed

with regard to the new application/process. All relevant information relating to

this application/process must be incorporated into the Disaster Recovery Plan.

Confidential

Refer to Figure 2: Plan Maintenance Coordination

Alterations must be incorporated into the Disaster Recovery Plan in a

structured fashion. It is imperative that all distributed copies of the Plan be the

same version. Where significant enhancements to disaster prevention

measures, business processing or other activities are planned, the Disaster

Operations Team Leader should be notified in advance to permit incorporation

into the Disaster Recovery Plan synchronous with the implementation of the

new measures to enable appropriate testing schedules to be devised.

Discuss with management the best method of notifying the DR Coordinator of

such plans.

Alterations to the Disaster Recovery Plan may affect the Disaster Recovery

Plan training materials used as part of new staff training. Ensure procedures

are developed to incorporate any changes to the Disaster Recovery Plan into

the training sessions where appropriate.

Refer to Figure 1: Plan Changes Notification and Distribution Procedures

When alterations are made to the Disaster Recovery Plan, the altered

sections must be replaced in all distributed copies.

Maintenance of Disaster Recovery Plan Hardcopies

Ensure all replaced sections are shredded or otherwise effectively discarded

so that out of date portions of the Plan are not accidentally used.

Prepare procedures for the appropriate replacement, off-site storage and

distribution of Disaster Recovery Plan.

Log Recovery Plan updates. The date of the distribution, as well as the list of

personnel to whom the update was distributed, should be logged.

Disaster Recovery Plan Reviews

The Disaster Recovery Plan should be reviewed by parties other than the

Disaster Operations Team Leader on a regular basis.

Auditors and senior management should be involved in reviews of the

Disaster Recovery Plan and associated information to ensure the plan is

relevant and accurate.

The entire Disaster Recovery Plan should be reviewed and discussed

annually by the Disaster Operations Team Leader, senior management and

the auditors. Future plans in the Municipality and the changes they will cause

in the Disaster Recovery Plan should also be discussed.

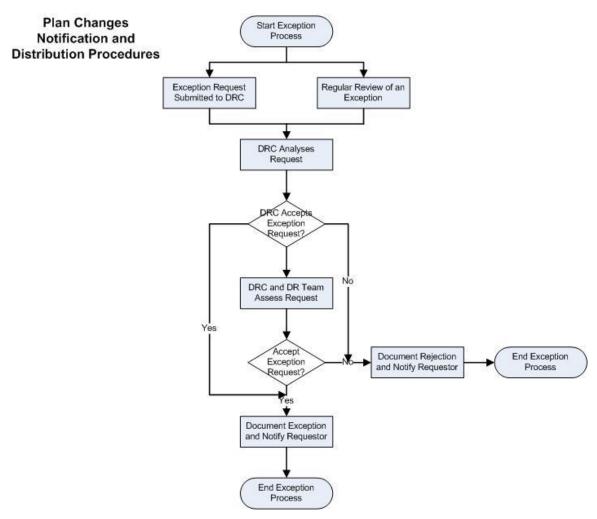

Figure 1: Plan Changes Notification and Distribution Procedures

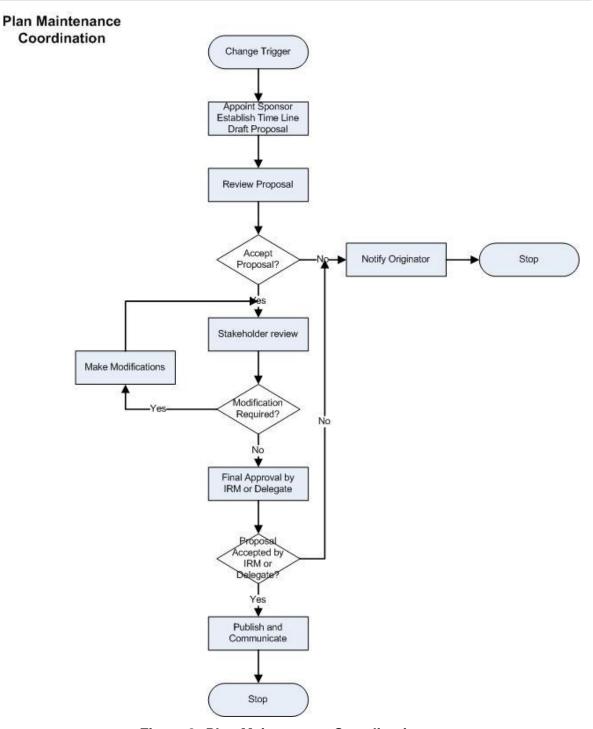

Figure 2: Plan Maintenance Coordination

6. INFRASTRUCTURE RECOVERY TEAMS AND TASKS

- 6.1 Hardware, Servers and Systems
- 6.2 End User Desktop Configuration Services

6.1 Hardware, Servers and Systems

Team Purpose

The Hardware, Servers and Systems Team (Appendix D) is responsible for administration, operations, scheduling, and the restoration of servers. The team consists of staff that have the technical knowledge to complete their set of recovery tasks and ensure that the hardware is operating in a proper manner, servers and applications on the servers are properly restored. This staff will also coordinate the delivery of the back-up media at the RECOVERY SITE and coordinate their efforts with the Disaster Operations team. Specialists with whom the Municipality have Service Level Agreements may be contacted to assist. See Appendix G.

Team Tasks

- ⇒ Leader Notify Infrastructure Recovery Team Members
 - Assemble Infrastructure Recovery Team Members at the RECOVERY SITE
 - Oversee Infrastructure Recovery process
 - Coordinate efforts with the Disaster Operations Team
- Recorder Records key issues at the test
 - Prepares and distributes the test report
 - Prepares and distributes the list of open issues
- Team Member Inventory Hardware
 - Monitor Server
 - Monitor Server Security
 - Ensure Recovery Environment Is Properly Backed-Up
 - If the Backup Server at the Offsite backup location is functional:
 - Begin Restoration of Servers. See Appendix O.
 - If the Backup Server at the Offsite backup location is not

functional:

- Receive delivery of backup disks from the off-site storage.
- Inventory of backup disks to ensure accurate delivery was made.
- Select backup disks containing server images
- Begin Restoration of Servers. See Appendix O
- Monitor Server Capacity After Restoration
- Follow Standard Change Management Practices (if necessary)
- Notify the Application Test Teams to proceed with tests

Server Restoration

When a Server is recovered, and exact image of the server is restored from the backups. This includes all systems running on the particular server. The systems are therefore not restored separately.

Servers must be restored in the following order:

- 7.1. PDC To handle authentication and the domain, physical and software.
- 7.2. SEB-SQL To handle the database of the financial server, virtual machine loaded as an image.
- 7.3. SENAPP To handle Financial Server applications (FMS V5/6), virtual machine loaded as an image.
- 7.4. Cloudware / Financial Server Virtual machine loaded as an image.
- 7.5. Email Physical and software.
- 7.6. Proxy Total link for internet and remote sites.

The above are the important servers that will allow all business processes to continue. The remaining servers can be restored in any order.

Server Specifications: See Appendix M

6.2 End User Desktop Configuration Services

Team Purpose

The End User Desktop Configuration Team (Appendix D) is responsible for the preparation/restoration of office equipment (Desktop PC's, Laptops, Printers and Scanners). The team consists of IT Technicians who will ensure that the office environment is properly configured at the Recovery Site and coordinate efforts with the remainder of the Disaster Operations team.

Team Tasks

- ⇒ Inventory critical office equipment
- ⇒ Connect all Desktop computers and Laptops to the domain
- ⇒ Ensure appropriate system security is enabled
- ⇒ Troubleshoot any end-user problems

End User Requirements: Advance Windows Skills

Navigation

Printer Selections

Domain logon understanding importance

Desktop/Laptop System(s):

- 1. Critical equipment required (Desktop Pc's, Laptops, Printers, Scanners)
- 2. Software on each desktop PC/Laptop:
 - a. Windows 10 Professional
 - b. Office 2016 Home & Business
 - c. Cloudware

Recovery Priority: Critical

Acceptable Recovery Timeframe: 24 hours

Recovery Team Responsibility: Manager: Information Technology

Equipment Hardware and Software Specifications: See Appendix M

7 APPLICATION TEST TEAMS AND TASKS

Team Purpose

The Application Test Teams are responsible for testing the restored applications to ensure that each application functions as expected and to determine the restoration point and general status. The test team for each system consists of staff who fully understand the application. Specialists with whom the Municipality have Service Level Agreements may be contacted to assist. See Appendix G.

7.1 Application Test Environment and Procedures

Application Test Teams – See Appendix D

End User Equipment Requirements – See Appendix M

IT Technical Support – See Appendix G

Vendors of IT Equipment – See Appendix G and H

Team Tasks

- Leader Notify Application Teams Members
 - Assemble Application Test Teams at RECOVERY SITE
 - Oversee Application Test process
 - Coordinate efforts with the Disaster Operations Team
- Recorder Records key issues at the test
 - Prepares and distributes the test report
 - Prepares and distributes the list of open issues

Application Test

As exact images of the Servers are restored from backups, all Applications need to be Accesses and Logged on to in the normal manner.

Financial Systems

The client PC needs to connect to Cloud via an internal network connection or alternately via the internet.

Site Requirements:

- 1. Reliable Network or Internet connection.
- 2. A shortcut on the desktop to log in on to Cloud.
- 3. Network or desktop printer.

Prepaid Vending

The client PC needs to connect to www.utilitiesworld.co.za via the internet. Site Requirements:

- 4. Reliable Internet connection to the internet.
- 5. A shortcut on the desktop to log in on the hosted server.
- 6. Thermal printer to print tokens.
- 7. Login and Sell

8 APPROVAL AND SIGN-OFF

APPROVAL

Date of Approval by Council: 28 July 2017

Resolution Number: 019/OCM/17

| MM YAWA | DATE |
|-------------------|------|
| MUNICIPAL MANAGER | |

RECOMMENDATION

That the report be noted.

That the Senqu Disaster Recovery Plan as part of the ICT Corporate Governance Framework be approved by Council.

C Directions to Recovery Site

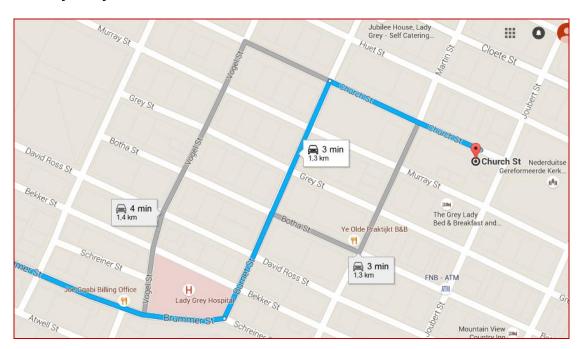

Recovery site in Lady Grey (-30.710912, 27.216570)

From East London

- 1. Continue to Fitzpatrick Rd/R72 (13 min 8.2 km)
- 2. Follow N6 to Young St/R58 in Aliwal North (3h 32 min 349 km)
- 3. Continue on R58 to your destination in Lady Grey (39 min 56.0km)

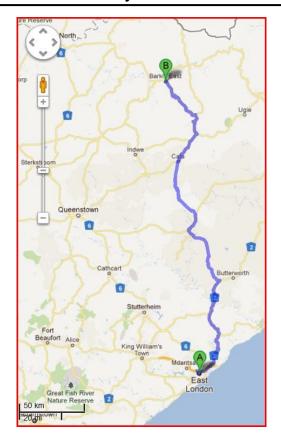

In Lady Grey

Recovery site in Barkly East

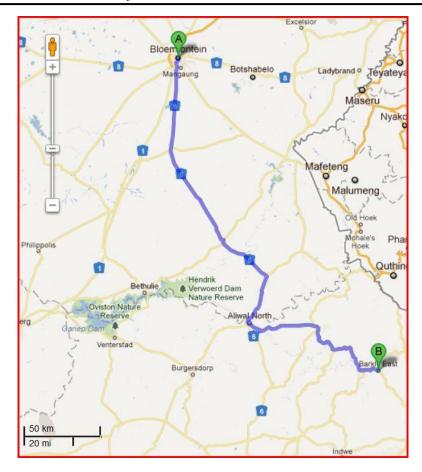

From East London

- 1. Head northeast on Maggs St toward McBeath Rd (71 m)
- 2. Take the 1st left onto McBeath Rd (350 m)
- 3. Take the 3rd left onto Curtis Rd (500 m)
- 4. Take the 3rd right onto Main Rd (2.3 km)
- **5.** Turn right to merge onto **N2 Rd** toward **Mthatha** (94.9 km)
- **6.** Turn left toward **R352** Go through 2 roundabouts (47.5 km)
- **7.** Turn right onto **R352** (5.4 km)
- **8.** Turn right onto **R61** (14.4 km)
- 9. Turn left toward **Titsa Rd** (51.4 km)
- 10. At the roundabout, take the 3rd exit onto Titsa Rd (1.3 km)
- **11.** Continue onto **R359** (18.3 km)
- **12.** Turn right onto **R56** Go through 1 roundabout (8.5 km)
- **13.** At the roundabout, take the **1st** exit onto **Lloyd St/R58** Continue to follow R58 (62.5 km)
- 14. Turn right onto De Villiers St/R58 (140 m)
- 15. Take the 1st left onto Molteno St/R58 (130 m)
- 16. Take the 1st left onto Graham St (60 m)
- 17. Turn Left in to Cole Street.
- 18. Turn Left into De Villiers Street.
- 19. The office is situated at the corner of De Villiers Street and Molteno Street.

From Bloemfontein

- 1. Head west on Maitland St toward Fichardt St (81 m)
- 2. Take the 1st left onto Fichardt St (80 m)
- 3. Take the 1st left onto St Andrews St (170 m)
- 4. Turn right onto Harvey Rd (2.1 km)
- 5. Turn left onto Kerk St (4.1 km)
- **6.** Continue onto **M30** (4.3 km)
- 7. Slight right to stay on M30 (78 m)
- 8. Continue onto N6 (122 km)
- 9. Turn left onto Rascher St/N6 Continue to follow N6 (72.1 km)
- 10. Turn right onto Somerset St (650 m)
- 11. Turn left onto Young St/R58 Continue to follow R58 (116 km)
- 12. Turn right onto Graham St (70 m)
- 13. Turn Left in to Cole Street.
- 14. Turn Left into De Villiers Street.
- 15. The office is situated at the corner of **De Villiers Street** and **Molteno Street**.

From Lady Grey

- 1. Head north toward Walton St (270 m)
- 2. Take the 1st left onto Walton St (89 m)
- 3. Continue onto Cloete St (900 m)
- 4. Turn left onto **Burnet St** (550 m)
- 5. Turn right onto Brummer St (2.9 km)
- 6. Turn left onto R58 (66.1 km)
- 7. Turn right onto Graham St (70 m)
- 8. Turn Left in to Cole Street
- 9. Turn Left into De Villiers Street.
- 10. The office is situated at the corner of De Villiers Street and Molteno Street.

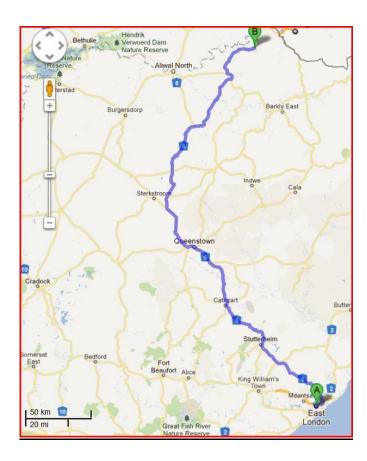

Alternate recovery site in Sterkspruit

From East London

- 1. Head northeast on Maggs St toward McBeath Rd 971 m)
- 2. Take the 1st left onto McBeath Rd (350 m)
- 3. Take the 3rd left onto Curtis Rd (500 m)
- 4. Take the 3rd right onto Main Rd (2.3 km)

- **5.** Turn right to merge onto **N2 Rd** toward **Mthatha** (7.1 km)
- **6.** Take exit **1049** for **N6/R72** toward **North East Express Airport/East London** (400 m)
- 7. Turn right onto N6 Go through 2 roundabouts (294 km)
- **8.** Turn right toward **R344** (24.1 km)
- 9. Continue straight onto R344 (31.8 km)
- **10.** Turn left onto **R58** (7.1 km)
- **11.** Turn right onto **R392** (37.1 km)
- 12. You will be in Main Street when you enter Sterkspruit.
- 13. Carry on in Main Street until you see Van Tonder Sreet on your Right.
- 14. Turn into the first entrance on your Right just after passing **Van Tonder Street**. You will be at the Senqu Municipal Offices.

From Bloemfontein

- 1. Head west on Maitland St toward Fichardt St (81 m)
- 2. Take the 1st left onto Fichardt St (80 m)
- 3. Take the 1st left onto St Andrews St (170 m)

- 4. Turn right onto Harvey Rd (450 m)
- 5. Turn left onto Fort St (1.4 km)
- 6. Continue onto Dr Belcher Rd (1.5 km)
- 7. Continue onto Heatherdale Rd (250 m)
- 8. Continue onto Dr Belcher Rd (2.3 km)
- 9. Continue onto Dewetsdorp Rd (5.4 km)
- 10. Continue onto R702 (88.9 km)
- 11. Continue straight onto R26 (68.8 km)
- 12. Turn left toward R726 (1.4 km)
- 13. Turn left onto R726 (35.2 km)
- 14. Continue onto R392 (15.3 km)
- **15.** Turn right (400 m)
- **16.** Take the 1st left (110 m)
- 17. Take the 1st right (500 m)
- **18.** Take the 2nd left (53 m)

- 1. Head north toward Walton St (270 m)
- 2. Take the 1st left onto Walton St (89 m)
- 3. Continue onto Cloete St (900 m)
- 4. Turn left onto Burnet St (550 m)
- 5. Turn right onto Brummer St (2.9 km)
- 6. Turn right onto R58 towards Aliwal North (3.9 km)
- 7. Turn right onto R392, passing Herschel and Bluegums to Sterkspruit. (37.1 km)
- 8. You will be in Main Street when you enter Sterkspruit.
- 9. Carry on in Main Street until you see van Tonder street on your Right.
- **10.** Carry on in **Main Street** and turn into the first entrance on your Right just after passing **Van Tonder Street**.
- 11. You will be at the Sengu Municipal Offices.

APPENDIX D: DISASTER TEAMS

Distribution List

It is possible that a facility-wide disaster could occur when few or no people are at the site. Therefore, Team Leaders should receive two copies of the Plan, and store one copy in the office and one copy at their homes. Additional hard copies are kept at the Off-site Backup location as well as in the safes of the Cashiers in Barkly East and Sterkspruit. When alterations are made to the Disaster Recovery Plan, the altered sections must be replaced in all distributed copies. As the plan is likely to be continually changing, it is necessary to keep only two completely up-to-date copies: one on-site and one off-site (in both hard copy and disk form). Updated sections will then be replaced in all distributed copies on a regular basis. Ensure all replaced sections are shredded or otherwise effectively discarded so that out of date portions of the Disaster Recovery Plan are not accidentally used.

Any proprietary information contained herein should be considered and distributed accordingly. Copies of this manual will also be maintained at an off-site location such as Recovery Sites in Lady Grey, Barkly East and Sterkspruit.

APPENDIX M: IT HARDWARE AND SOFTWARE SPECIFICATIONS

Anti-Virus Software

Backup Power (Batteries)

Backup Software Licenses

End User Equipment & Software

- Binder Electric Comb Binder
- **GPS** Handheld GPS
- Keyboard & Mouse
- Printers
 - o Thermal Slip (Cashiers only)
 - Dot Matrix (Cashiers only)
 - Mono Laser A4 MFP & ADF (1 5 users)
 - Mono Laser A4 MFP & ADF (6 10 users)
 - Colour Laser A4 MFP & ADF
 - o Colour Laser A3
- Projector
 - o Data Projector
- Recorder
 - Voice Recorder
- Scanner Documents
 - Scanner Higher Volume
 - Scanner Lower Volume
- Screen/Monitor
- Shredder
- Software
 - o MS Office 2016 Home & Business
 - o MS Office 2016 Professional
- Workstations
 - o Cloudgate Square
 - o Desktop PC
 - o Laptop Higher processing
 - Laptop Standard processing

| Service Level Agreement (SLA) | |
|--|--|
| Terms and Conditions of the Supplier must be included with the tender else | |
| the tender will not be accepted. | |
| Note: The Terms and Conditions wil be included in the SLA with Senqu | |
| Municipality if the quote is accepted. | |
| The SLA will cover 3 years from the commencement date which will be | |
| The price must be inclusive of delivery to Senqu Municipality at 19 Murray | |
| Street, Lady Grey (if required) as well as VAT. | |
| Installation will be done by Senqu IT with telephonic/remote assistance from | |
| the Supplier. | |

| BACKUP | POWER | |
|---------------|--|--|
| | | |
| | BATTERIES | |
| 16 | Fully-sealed deep cycle, high cycle rechargeable AGM+GEL VRLA hybrid | |
| | battery 12V-120Ah - design life 8-10 years | |
| | | |
| 1 | 48V 8000W Inverter/Charger (enough for 8-10 servers) | |
| | PowerControl / PowerAssist : Yes | |
| | Integrated Transfer switch : Yes | |
| | AC inputs (2x) Input voltage range: 187-265 (1 for Escom, 1 for Fail-over | |
| | Generator) | |
| | VAC Input frequency: 45 – 65 Hz Power factor: 1 | |
| | Maximum feed through current (A) 2x100 | |
| | | |
| | INVERTER | |
| | Input voltage range (V DC) : 38 – 66V | |
| | Output (1) Output voltage: 230 VAC ± 2% Frequency: 50 Hz ± 0,1% | |
| | Cont. output power at 25 °C (VA) 8000 | |

| End User Equipment and Software | | |
|---------------------------------|-------------------------------|--|
| Quantity | Actual Specifications | Requirement (Minimum / Maximum / Or Equivalent) |
| | BINDER – ELECTRIC COMB BINDER | |

| • | Binds up to 480 sheets | Minimum |
|---------|---|------------|
| • | Closure control guarantees easy comb closure | Equivalent |
| • | Gauge to alter margin for a stronger bind | Equivalent |
| • | Special hardened punch pins for long lasting life | Equivalent |
| • | Staggered punching pins for better punching | Equivalent |
| • | QSA (Quick Size Adjustment) for high flexibility of different paper formats: A5 and A4 | Equivalent |
| • | Adjustable side lay for perfect punching registration | Equivalent |
| • | Easy to empty sliding waste tray | Equivalent |
| • | Measures the document or comb size | Equivalent |
| • | Heavy duty construction & compact design | Equivalent |
| GPS – H | IANDHELD GPS | |
| Physica | l & Performance | Equivalent |
| • | Unit Dimensions, WxHxD: 2.4" x 4.5" x 1.3" (6.1 x 11.4 x 3.3 cm) | Equivalent |
| • | Display size, WxH: 1.5"W x 2.5"H (3.8 x 6.3 cm) 3" diag (7.6 cm) | Equivalent |
| • | Display resolution, WxH: 240 x 400 pixels | Equivalent |
| • | Display type: transreflective colour TFT touchscreen | Equivalent |
| • | 7.4 oz (209.8g) with batteries | Equivalent |
| • | Rechargeable NiMH pack (must include charger) | Equivalent |
| • | Battery Life: 16 Hours | Minimum |
| • | Water rating: IPX 7 | Equivalent |
| • | High –sensitivity receiver: Yes | Equivalent |
| • | Interface: high-speed USB and NMEA 0183 compatible | Equivalent |
| Maps & | Memory | |
| • | Basemap: Yes | Equivalent |
| • | Ability to add maps: Yes | Equivalent |
| • | Built-in memory: 4GB | Minimum |
| • | Accepted data cards: microSD 32 GB (must include 1X 32GB microSD Card) | Minimum |
| • | Waypoints/favourites/locations: 4000 | Minimum |
| • | Routes: 200 | Minimum |
| • | Track log: 10,000 points, 200 saved tracks | Minimum |
| Feature | s & Benefits | |
| • | Automatic routing (turn by turn routing on roads): Yes (with optional mapping for detailed roads) | Equivalent |

| Electronic compass: Yes (tilt-compensated 3-axis) | Equivalent |
|--|------------|
| Touchscreen: Yes | Equivalent |
| Barometric altimeter: Yes | Equivalent |
| Camera: Yes (8megapixel with autofocus; digital zoom) | Equivalent |
| Geocaching-friendly: Yes (Paperless) | Equivalent |
| Custom maps compatible: Yes | Equivalent |
| Photo navigation (navigate to geotagged photos): Yes | Equivalent |
| Area calculation: Yes | Equivalent |
| Custom POIs (ability to add additional points of interest): Yes | Equivalent |
| Unit-to-unit transfer (shares data wirelessly with similar units: Yes (plus images and custom maps | Equivalent |
| Picture viewer: Yes | Equivalent |
| | |
| KEYBOARD AND MOUSE | |
| USB Connection Wired | Equivalent |
| Quiet Typing | Equivalent |
| Spill-resistant | Equivalent |
| High-definition optical tracking (1000dpi) | Equivalent |
| Thin Profile | Equivalent |
| PRINTERS | |
| PRINTER MONO LASER A4 MFP & ADF (1 – 5 Users) | |
| Functions: Print, Copy, Scan | Minimum |
| Print Speed: Up to 23 ppm (A4) | Minimum |
| Printing Method: Monochrome laser beam printing | Equivalent |
| Print Quality: Up to 1200 x 1200 dpi with Image Refinement | Equivalent |
| Print Resolution: 600 x 600 dpi | Equivalent |
| First Print Out Time: 6 secs or less | Equivalent |
| Printer languages: UFRII LT | Equivalent |
| Print margins: 5 mm-top, bottom, left and right (other sizes than envelope) 10 mm-top, bottom, left and right (envelope) | Equivalent |
| Toner save mode: Yes | Equivalent |
| Media Handling | |
| | |

| • | Paper Input (Standard): 250 sheet tray; 35 sheet ADF (80g/m ² or less) | Minimum |
|--------|---|------------|
| • | Paper output: 100 Sheet | Minimum |
| • | Duty cycle: Max. 8 000 pages per month | Minimum |
| • | Memory: 256 MB | Equivalent |
| • | Control Panel: 6-line LCD B&W Touch Screen | Equivalent |
| • | Warranty: One-year limited warranty | Minimum |
| PRINTE | R MONO LASER A4 MFP & ADF (6 – 10 Users) | |
| • | Functions: Print, copy, scan, fax | Minimum |
| • | First page out (ready) black): As fast as 8 sec | Minimum |
| • | Resolution (black): Up to 1200 x 1200 dpi | Equivalent |
| • | Resolution Technology: Res 1200, 600 dpi | Equivalent |
| • | Monthly Duty Cycle: Up to 15,000 pages | Minimum |
| • | Recommended monthly page volume: 500 to 2000 | Equivalent |
| • | Print Technology: Laser | Equivalent |
| • | Display: 3.0" touchscreen, LCD (color graphics) | Equivalent |
| • | Paper trays, standard: 1 (plus 10-sheet priority tray) | Minimum |
| • | Connectivity, standard: Hi-Speed USB 2.0 port (host/device); built-in | Minimum |
| | Fast Ethernet 10/100Base-TX network port; Phone line port (in/out) | |
| • | Network ready: Standard (built-in Ethernet, WiFi 802.11b/g/n) | Equivalent |
| • | Ports: 1 Hi-Speed USB 2.0; 1 Hi-Speed USB 2.0 (host); 1 Ethernet 10/100Base-TX; 1 phone line (in); 1 phone line (out); 1 Wireless 802.11b/g/n | Equivalent |
| • | Security management: Password-protected network embedded Web server; Enable/disable Network ports; SNMPv1 community password change | Equivalent |
| • | Paper handling input, 250-sheet input tray, 10-sheet priority tray, 35-sheet Automatic Document Feeder (ADF) | Minimum |
| • | Paper handling output, standard: 100-sheet output bin | Minimum |
| • | Duplex printing: Automatic (standard) | Equivalent |
| • | Media sizes supported: A4 | Minimum |
| • | Print speed, black (normal): Up to 26 ppm | Minimum |
| • | USB Cable included:1 USB cable | Equivalent |
| • | Warranty: One-year limited warranty | Minimum |

| PRINTER COLOUR LASER A4 MFP & ADF | |
|--|------------|
| Print speed Black & Colour: Up to 24 ppm | Minimum |
| Duty cycle (monthly, A4): Up to 50,000 pages | Minimum |
| Recommended monthly page volume: 750 to 4 000 | |
| Print Technology : Laser | |
| First page out (ready) Black & Colour: As fast as 10 sec | Minimum |
| Paper handling input, standard: | Minimum |
| 50-sheet multipurpose tray250-sheet input tray | |
| • 50-sheet Automatic Document Feeder (ADF) | |
| Print quality black & color (best): Up to 600 x 600 dpi. | Minimum |
| High -speed USB 2.0 connectivity | Equivalent |
| One-year onsite warranty | Minimum |
| PRINTER COLOUR LASER A3 | |
| Print speed Black & Colour: Up to 20 ppm | Minimum |
| Duty cycle (monthly, A4): Up to 75,000 pages | Minimum |
| Recommended monthly page volume : 1500 - 5000 | Minimum |
| Print Technology : Laser | Equivalent |
| Paper handling input, standard: | Minimum |
| 100-sheet multipurpose tray250-sheet input tray 2 | |
| Print quality black & color (best): Up to 600 x 600 dpi. | Minimum |
| High -speed USB 2.0 connectivity | Equivalent |
| One-year onsite warranty | Minimum |
| PRINTER – USB THERMAL SLIP PRINTER (Cashiers only) | |
| THATEN OUD THERMAL SEIT FRINTER (Cashiels Only) | |

| | | A distant |
| • | Contrast Ratio13,000:1 | Minimum |
| • | Aspect Ratio: 4:3 (Native), 16:9 (Compatible) | Equivalent |
| • | Throw Ratio: 1.95 (1270 mm@2000 mm) | Equivalent |
| • | Lamp Life: 5000 Hour (Normal Mode); 6000 Hour (Economy Mode) | Minimum |
| • | Brightness: 2800 lm | Equivalent |
| • | Resolution: SVGA (800 x 600) | Equivalent |
| • | Supply with Carry Bag | Equivalent |
| VOIC | E RECORDER | |
| • | Display Type: LCDMemory | Equivalent |
| • | Size: 8 GB Built in Memory | Minimum |
| • | Intelligent Noise Cut | Equivalent |
| • | Battery Life – 15 Hours (minimum) | Minimum |
| • | Recording Format Linear PCM/MP3 | Equivalent |
| • | Playback Format MP3/AAC/WMA/WAV | Equivalent |
| • | Stereo Headphones, USB cable, Application software, Carrying pouch | Equivalent |
| • | LPCM (44.1kHz, 16-bit) 10 Hrs | Minimum |
| • | 128kbps Recording Time 110 Hrs | Minimum |
| • | PC Connectivity – Yes | Equivalent |
| • | Supplied software - Yes | Equivalent |
| • | Earphone Jack - Yes | Equivalent |
| • | Voice-Operated Recording (VOR) - Yes | Equivalent |
| • | Low Cut Filter - Yes | Equivalent |

| • | Digital Pitch Control - Yes | Equivalent |
|-------|---|------------|
| • | Digital Voice Up - Yes | Equivalent |
| • | USB Charge - Yes | Equivalent |
| • | Microphone Input - Yes | Equivalent |
| • | Track Mark - Yes | Equivalent |
| • | Sync Recording - Yes | Equivalent |
| • | Cross-memory record - Yes | Equivalent |
| DOCUI | MENT SCANNER – SLOWER | |
| • | Scan type: Sheetfed | Equivalent |
| | | |
| • | Automatic document feeder capacity: Standard, 50 Sheets | Minimum |
| • | Automatic document feeder scan speed: Monochrome & Colour - 30 ppm | Minimum |
| • | Automatic document feeder type: Single pass dual scanning. | Equivalent |
| • | Duplex Scan: Yes | Equivalent |
| • | Output formats: PDF, searchable PDF, secure PDF, PDF/A. Skip blank page, A3 stitching, Punch holes removal, Pre-defined scanning settings | Minimum |
| • | Interfaces : USB 2.0 Type B | Equivalent |
| • | Compatible Operating Systems : Windows 7, Windows 8, Windows 8.1, Windows 10 | Minimum |
| • | Warranty: 12 months | Minimum |
| DOCUI | MENT SCANNER – FASTER | |
| • | Scan type: Sheetfed | Equivalent |
| • | Scan Resolution, optical: Up to 600 dpi | Minimum |
| • | Automatic document feeder capacity: Standard, 50 Sheets | Minimum |
| • | Automatic document feeder scan speed: Up to 45 ppm/90 ipm (black-and white, greyscale, colour, both 200 dpi and 300). | Minimum |
| I | | |

| Compatible Operating Systems: Windows 7, Windows 8, Windows 8.1, Windows 10 | Minimum |
|---|------------|
| Warranty: 12 months | Minimum |

| File Server – Specific Requirements for the various Servers | | |
|---|---|--|
| BACKUP | Main Backup Server for All servers. Holding a complete online copy of all the server's data for 6 months or longer. | |
| SERVER | The Backups are available as per files, group of files, bare metal recovery or mounted image Physical Server | |
| | Core i5 2.4Ghz CPU, 8GB RAM, 6TB Raid Drive primary and 8TB Raid Drive secondary, Windows Server 2008 R2 | |
| BDC | Fail-over Domain Controller, Secondary DNS Server (assigns shortest routes to local and internet routes) | |
| | Physical Server (planning to change to Virtual soon) | |
| | Quad Core 2.2Ghz CPU, 4GB RAM, 1TB Hard disk, Windows Server 2008 R2 | |
| CW - SERVER | Primary Financial Solution server and "CloudWare" server for all external users to be able to access internal resources Virtual Server | |
| | Dual Xeon 2.6Ghz CPU, 32GB RAM, 720GB Hard disk, 80% free HDD space, Hot swappable fans, Hot swappable Hard Drives, Dual hot swappable power supplies, RAID Level 5/6, Windows Server 2012 R2 | |
| EDMS | Electronic Document Management Solution Server (stores all electronic documents for Senqu) Virtual Server | |
| | Dual Xeon 2.6Ghz CPU, 32GB RAM, 200GB Hard disk, Windows Server 2008 R2 | |
| EXCHANGE | Primary Email Server (hosts all emails for the senqu.gov.za domain) | |
| | Physical Server (planning to change to Virtual soon) | |
| | Dual Xeon 2.6Ghz CPU, 24GB RAM, 1.5TB Hard disk, Windows Server 2008 R2 | |

| | Exchange Email Server Specifications |
|------------|--|
| | Hardware: |
| | 1 X 2U Rackmount Platform |
| | 2 X Intel Xeon 5504 2.00GHz CPU |
| | 5 X Seagate Cheetah 146GB SAS Drives |
| | |
| | 1 X Basic Side Rail |
| | 1 X Slim DVD Writer |
| | 1 X Intel 2 nd PSU 750W |
| | 6 X Transcend 2GB DDR3-1333 ECC Ram |
| | 1 X SR2500 ACC 6Ch/SAS HDD Kit |
| | 1 X Intel Black 8CH SAS Raid 256MB |
| | 1 X Smart Battery for Raid |
| | Software: |
| | 1 X Microsoft Windows Server 2008 32Bit / x64 |
| | |
| | Standard Edition & 5 CAL DSP DVD SP2 |
| | 10 X 5-Pack Client Access License (windows) |
| | 1 X Microsoft Exchange server 2010 (Enterprise) |
| | 50 X 1-Pack Client Access License (exchange) |
| | |
| MGMT | Management Server – Network Management and reporting server, Internal Issue manager and |
| | helpdesk server, Enterprise Wifi management Server Physical Server |
| | Dual Xeon 2.6Ghz CPU, 32GB RAM, 1TB Hard disk, Windows Server 2008 R2 |
| MIS-SERVER | Issue Manager Server (supposed to be the main issue manager interface for Senqu) |
| | Virtual Server Dual Xeon 2.6Ghz CPU, 32GB RAM, 120GB Hard disk, Windows Server 2008 R2 |
| NVR | Network Video Recorder for all IP cameras of the Ubiquity make |
| | Physical Server |
| | Dual Core 2.4Ghz CPU, 4GB RAM, 1TB Hard disk, Windows Server 2008 R2 Primary Domain Controller, DHCP Server (Assigns IP Addresses to entire network), Primary DNS |
| PDC | Server (assigns shortest routes to local and internet routes), AntiVirus Server |
| | Physical Server (planning to change to Virtual soon) |
| | Dual Xeon 2.6Ghz CPU, 32GB RAM, 2.17TB Hard disk, Windows Server 2008 R2 |
| SEB-SQL | FMS V6 Database Server (holds the primary database FMS uses for all financial transactions for Senqu Municipality) |
| | Virtual Server |
| | Dual Xeon 2.6Ghz CPU, 32GB RAM, 160GB Hard disk, Windows Server 2008 R2 |
| SENAPP | FMS V6 Application Server (holds the primary application FMS uses for all financial transactions |
| | for Sengu Municipality) |
| | Virtual Server Dual Xeon 2.6Ghz CPU, 32GB RAM, 120GB Hard disk, Windows Server 2008 R2 |
| VAICUE | Windows Server Update Server ("download once distribute many" solution to all windows and |
| WSUS | office updates) |

Physical Server (planning to change to Virtual soon)
Quad Core 2.4Ghz CPU, 8GB RAM, 1TB Hard disk, Windows Server 2008 R2

| | DVR Recorder 32CH CONVENTIONAL NVR, 32CH 4MP Real-time, Output: HDMI & VGA, Small 1U Case, Audio In/Out, Alarm In/Out, 2 SATA (6TB), 800/960FPS | Equivalent |
| | DVR Recorder 16CH CONVENTIONAL NVR, 4MP Real-Time, Output: HDMI & VGA, 1U Case, Audio In/Out, Alarm In/Out, 2 SATA (6TB), 400/480FPS | Equivalent |
| | Power Supply 24+2Combo-Port 10/100 Mbps PoE Switch, Downlink: 24x100Mbps Ports, Uplink: 2 x 1G Port or 2 SFP (Combo) (optical), 370 watt (Avg:15w Max 30W per ch), Rack Mounted | Equivalent |
| | Power Supply 16+2Combo-Port 10/100 Mbps PoE Switch, Downlink: 16x100Mbps Ports, Uplink: 2 x 1G port or 2 SFP (Combo) (Optical), 250 watt (Avg:15w Max 30W per Ch), Rack Mounted | Equivalent |
| | 4X4 Wallboxes + Lids - Plastic | Equivalent |
| | 6TB Hard drives (internal) Surveillance HDD 6TB Serial ATA 600 (6Gbps) - 128MB Cache @ 7200rpm | Equivalent |
| | StoreJet 8TB 3.5" Aluminum Turbo External SATA HDD - USB 3.0, Plug & Play, Hot Swap, External Power. | Equivalent |
| | CAT6 Networking Cable, Pure Copper (NOT CCA), Overall Nominal Diameter 23AWG UTP, Meet or exceed the TIA/EIA 568B requirements | Equivalent |
| | RJ45 Connectors, 6-50micron staggered gold plated (preventing oxidation). Meet or exceed the T568A and T568B requirements. | Equivalent |
| | Patch Panel 24 Port 1U for 19" Rack, Black Electrostatic Powder coated, Phosphor bronze with 6-50 micro inches gold plated connectors, meet or exceed requirements for CAT6A standard | Equivalent |
| | Brush Panel 1U | Equivalent |
| | 40x40 Trunking EGA Plastic 16x25 Trunking EGA Plastic | Equivalent |
| | Twin data cradle with 2x RJ45 (CAT6) sockets plus cover plate (For powder coated skirting, grey in colour) CAT6 Wallbox with single outlet, meet or exceed EIA/TIA 568A CAT6 spesification | Equivalent |
| | UniFi AP (wireless) Long Range | Equivalent |

| Nanostation LOCO M5 MiMo (5Ghz) | Equivalent |
|--|------------|
| - (2) 10/100 Ethernet Ports | |
| - Power Supply (PoE): 24V, 0.5A | |
| - Gain: 16 dBi | |
| - Polarisation: Dual Linear | |
| - Outdoor UV Stabilised Plastic | |
| - Mounting: Pole Mounting Kit Included | |
| - Power Method: Passive Power over | |
| 800W Inverter | Equivalent |
| Pure sine wave inverter, Built-in MPPT solar charge controller | |
| Selectable charging current based on applications, Configurable AC/Solar | |
| input priority via LCD setting | |
| Compatible to mains voltage or generator power, Auto restart while AC is | |
| recovering | |
| Overload and short circuit protection, Smart battery charger design for | |
| optimized battery performance | |
| Rated Power: 1000VA/800W, Voltage: 230 VAC, Surge Power: 2000VA | |
| Efficiency: 93%, Transfer Time: 10ms or less, Battery Voltage: 24 VDC | |
| Overcharge Protection: 31 VDC, Maximum Charge Current: 20 A or 30 A | |
| Maximum PV Array Power: 600 W, Maximum Charging Current: 25A | |
| Deep cycle batteries – Fully-sealed deep cycle, high cycle rechargeable | Equivalent |
| AGM+GEL VRLA hybrid battery 12V-120Ah - 10 year design life in standby use | |
| or up to 4200 cycles at 20% DoD, 8mm Screw Terminals | |
| 24-port hardware Layer 2 Switch with 28-Port Gigabit WebSmart Switch with | Equivalent |
| 24 UTP and 4 SFP Ports | |
| DGS-1210-28 | |

| Quantity | Actual Specifications | Requirement (Minimum / Maximum / Or Equivalent) |
|----------|---|--|
| 1 X | 16-Bay NAS Server | Equivalent |
| | Processor: Intel® Xeon E3-1231 v3 3.4GHz Processor + Intel C224 chipset SAS/SATA controller (HBA), PCI-e(8-lane), LSI HBA card supports 12G SAS/6G SATA Supported | Equivalent |
| | Daisy Chain expansion port Supported, Allowed to daisy chain to an additional 4 sets, Can extend for 5 additional iSCSI volumes | Equivalent |
| | System Memory : 16GB DDR3 ECC | Minimum |
| | Total Memory Slots: 4 Expandable up to 32GB | Minimum |
| | LAN Interface (PCI-e) | Equivalent |
| | System Memory : 16GB DDR3 ECC | Equivalent |
| | Total Memory Slots: 4 Expandable up to 32GB | Minimum |
| | LAN Interface (PCI-e) | Equivalent |

| | RJ-45 x4 :Auto MDI/MDI-X | |
|------|---|------------|
| | USB 2.0 host port x4 (front x2, back x2)(Type A) | Equivalent |
| | USB 3.0 host port x2 (back x2) | Equivalent |
| | Available PCI-e slots PCI-e x8 (x1), PCI-e x4(x1), PCI-e x1 (x1) | Equivalent |
| | Power Supply Redundant power supply 500W or more (80plus) | Equivalent |
| | 16 x SATA/SAS for internal interface | Equivalent |
| | 3U Rack Mount | Equivalent |
| | RAID Modes : 5, 6, 50, 60 | Minimum |
| | TCP/IP/AppleTalk | Equivalent |
| | Link Aggregation | Equivalent |
| | Load balance, Failover, 802.3ad, Balance-XOR, Balance-TLB, Balance-ALB, Broadcast | Equivalent |
| | Cient OS Support Windows XP/2003/2008/2012/Vista/7/8/8.1/10/UNIX/Linux/Mac OS X | Equivalent |
| | iSCSI Target/Initiator Supports Microsoft/Mac OS X/Linux initiators | Equivalent |
| | Multiple File System Selectable EXT3/EXT4/XFS/Btrfs | Equivalent |
| | Web-based user interface supports English, Clustering, Multiple RAID, Windows ADS, Block Level Access | Equivalent |
| 5 X | Hard Disks for NAS Enterprise NAS HDD 8TB - SATA 6GB/s with 256MB Cache @7200rpm | Equivalent |
| 10 X | 8TB 3.5" Serial ATA 600 (6Gpbs) with 256MB cache @ 7200rpm NCQ | Equivalent |
| 14 X | 8TB 3.5" Aluminium Turbo External SATA HDD – USB 3.0, Hot Swap, External Power | Equivalent |
| | | |

| Pressure Sealer – Heavy Duty | | |
|------------------------------|--|---|
| Quantity | Actual Specifications | Requirement (Minimum / Maximum / Or Equivalent) |
| 1 | Pressure Sealer | |
| | Speed – 4000 sheets/hour | Minimum |
| | Paper/Form Size – A4/Letter/Legal | Minimum |
| | Folds – Z , C & V | Minimum |
| | Feeder Capacity – 150 sheets | Minimum |
| | Output Capacity – 200 sheets | Minimum |
| | Duty Cycle – 50 000 sheets/month | Minimum |
| | Manual Feeder for processing single or damaged forms | Equivalent |
| | Paper Weight – 60 – 120 gsm | Minimum |
| | Double Document Detection | Equivalent |
| | 12 Month Warranty | Minimum |

| | Price includes Installation and Training | Minimum |
|--|---|------------|
| | A Maintenance Contract is NOT required | Equivalent |
| | Parts and Repair Facilities are available in South Africa | Equivalent |

| Quantity | Actual Specifications | Requirement (Minimum / Maximum / Or Equivalent) |
|----------|--|--|
| | Printer – Multi-Function A3 Colour Laser | |
| | Functions: Print, copy, scan, fax, digital send, easy access USB, offset and staple capabilities | Equivalent |
| | Access Control Capabilities: Yes | Equivalent |
| | Colour Print User Control: Yes | Equivalent |
| | Multitasking supported: Yes | Equivalent |
| | Print speed black:Normal: Up to 28 ppm | Minimum |
| | Print speed color:Normal:Up to 25 ppm | Minimum |
| | First page out (ready) | |
| | Black: As fast as 11.5 sec Color: As fast as 11.5 sec | |
| | Duty cycle (monthly, A4): Up to 100,000 pages | Minimum |
| | Recommended monthly page volume: 2500 to 7000 | Minimum |
| | Print technology: Laser | Equivalent |
| | Print quality black (best): Up to 600 x 600 dpi | Minimum |
| | Display: Touchscreen Colour Graphic Display (CGD) | Equivalent |
| | Processor speed: 800 MHz | Minimum |
| | Automatic paper sensor: Yes | Equivalent |
| | Connectivity, standard | Equivalent |
| | 1 Hi-Speed USB 2.0 Host | |
| | 1 Hi-Speed USB 2.0 Device | |

| I | | |
|---|---|------------|
| • | 1 Gigabit Ethernet 10/100/1000T network | |
| • | 1 Foreign Interface (FIH) | |
| • | 1 Hardware Integration Pocket (HIP Pocket) | |
| • | 2 Internal USB 2.0 Host | |
| • | 1 Fax port | |
| • | Network ready: Standard (built-in Gigabit Ethernet) | Equivalent |
| • | Memory, standard: 1536 MB | Equivalent |
| • | Maximum memory:1536 MB | Equivalent |
| • | Hard disk | Minimum |
| • | Standard Hard Disk, minimum 320 GB | |
| • | AES 256 hardware encryption or greater | |
| • | Paper handling input, standard: | Minimum |
| | 100-sheet multipurpose tray | |
| | 250-sheet tray 2 | |
| | 3x500-sheet Paper Feeder and Stand 3, 4 and 5 | |
| | 100-sheet Automatic Document Feeder (ADF) | |
| • | Paper handling output, standard: 250-sheet output tray; 500-sheet inline stapler/stacker | Equivalent |
| • | Maximum output capacity (sheets): Up to 750 sheets (with stapler/stacker) | Equivalent |
| • | Duplex printing: Automatic (standard) | Equivalent |
| • | Media sizes supported: A5, A4, A3 | Minimum |
| • | Media types: Paper (plain, light, bond, recycled, mid-weight, heavy, extra heavy, mid-weight glossy, heavy glossy, extra heavy glossy, cardstock, card glossy), | Equivalent |
| • | Scanner type: Flatbed, ADF | Equivalent |
| • | Scan file format: PDF, JPEG, TIFF, MTIFF, XPS, PDF/A | Equivalent |
| • | Scan resolution, optical: Up to 600 dpi | Minimum |
| • | Scan size (flatbed), maximum: 297 x 420 mm | Equivalent |
| • | Copy speed (normal) | Equivalent |
| | o Black: Up to 30 cpm | |

| | Color: Up to 30 cpm | |
|---|--|------------|
| • | Copy resolution (black text): Up to 600 x 600 dpi | Equivalent |
| • | Copy resolution (color text and graphics): Up to 600 x 600 dpi | Minimum |
| • | Copy reduce / enlarge settings: 25 to 400% | Equivalent |
| • | Fax transmission speed:6 sec per page | Equivalent |
| • | Fax resolution: Up to 300×300 dpi (400×400 dpi for received faxes only) | Minimum |
| • | USB Cable included:1 USB cable | Equivalent |
| • | Training of users of this Printer as well as installation is included in the price. | Equivalent |
| • | Proposed Maintenance Contract covering | Equivalent |
| | Cost per copy, service and parts included with the proposal. | |

Security Software

Background: Senqu Municipality currently uses a **Business Internet Server (BISBox) or equivalent. It is a** comprehensive and reliable Internet Server that provides Senqu with all the functionality it needs to utilize the power of the Internet, from remote access; to the effective management and control of Internet resources within a secure environment.

The BISBox (or equivalent) is up and running therefore this request for a quotation is not for the hardware, software or installation but ONLY for the license renewal and support covered by the license agreement of the BISBox (or equivalent) software. Please quote for the BISBox (or equivalent) license starting from 1 November 2016 for a period of 3 years.

Terms and Conditions of the Bidding Company (Supplier) **must be included with the` tender else the tender** will not be accepted.

Requirements

The service provider must be an authorised supplier of the software and must be able to provide support when required.

The Service Level Agreement must guarantee a response time to any problem with BisBox (or equivalent) or its functioning, within 1 hour (when called between 8:00 and 16:30 on weekdays).

The service provider must also be able to provide telephonic support at no extra cost to the municipality.

Failure to comply with the above requirements will result in the supplier being blacklisted.

Service Level Agreement (SLA)

Terms and Conditions of the Supplier must be included with the tender else the tender will not be accepted. *Note: The Terms and Conditions will be included in the SLA with Senqu Municipality if the quote is accepted.*

The SLA will cover 3 years from the commencement date which will be 1 November 2016.

The price must be inclusive of delivery to Senqu Municipality at 19 Murray Street, Lady Grey (if required) as well as VAT

Please complete the amounts:

Senqu Municipality Disaster Recovery Plan

| Price | Amount Inc. VAT |
|--|-----------------|
| | |
| License for year 1 (1 Nov 2016 – 31 October 2017) | R |
| | |
| License for year 2 (1 Nov 2017 – 31 October 2018) | R |
| | |
| License for year 3 (1 Nov 2018 – 31 October 2019) | R |
| | |
| Total Price for the above 3 Years | |
| (The total will be used for price evaluation purposes) | R |
| | |
| Note: The above prices must correspond with prices on your quote | |

| Quantity | Actual Specifications | Requirement (Minimum / Maximum / Or Equivalent) |
|----------|---|--|
| 3 X | Physical Hosts | Equivalent |
| 2 X | Processors per host | Equivalent |
| | Required to | |
| | Provide a reliable virtualisation platform and centralised management for up to three server hosts. | Equivalent |
| | Run up to 20 workloads | Equivalent |
| | Always available IT without shared storage hardware. | Equivalent |
| | Simplify IT by separating applications and operating systems (OSs) from the underlying hardware which allows existing applications to see dedicated resources, and servers to be managed as a pool of resources. | Equivalent |
| | Functions | |
| | Maximise application availability and protect information assets - Always available IT with live migration for virtual machines and high availability for applications in virtual-machine clusters. Protects data with integrated backup, recovery and failover features. | Equivalent |
| | Provision new applications in minutes instead of days or weeks, monitor virtual-machine performance and automate patch and update management. | Equivalent |
| | Streamline software development – Safely test complex multitier configurations in a secure, isolated sandbox environment while enabling test and development teams to share server, network | Equivalent |

| and storage infrastructure. | |
|---|------------|
| Key Features and Components | |
| Architecture that provides a robust, production-proven, high- performance virtualization layer that enables multiple virtual machines to share hardware resources with performance that can match or exceed native throughput | Equivalent |
| Provides centralized management and performance monitoring for all virtual machines and hosts with built-in physical-to-virtual (P2V) machine conversion and rapid provisioning, using virtual- machine templates. | Equivalent |
| Enables virtual machines to access shared storage devices (Fibre Channel, iSCSI, etc.) | Equivalent |
| Provides dynamic allocation of shared storage capacity, enabling IT organizations to implement a tiered storage strategy while reducing storage spending by up to 50 percent | Equivalent |
| Provides integration with supported third-party data protection. | Equivalent |
| Enables IT administrators to rapidly convert physical servers to VMware virtual machines. | Equivalent |
| Hardware compatibility is possible with the broadest range of 32- and 64-bit servers and OSs, storage and networking equipment and enterprise management tools. | Equivalent |
| Business-continuity features | |
| Enables live migration of virtual machines across servers with no disruption to users or service loss. | Equivalent |
| Provides simple, cost-effective backup and recovery for virtual machines. Enables agentless backups with built-in deduplication. | Equivalent |
| Provides agentless antivirus and antimalware protection to secure your virtual machines | Equivalent |
| Capabilities | |
| Running (min RAM 256GB) | Equivalent |
| To be installed on: | |
| o 36TB RAID-5 Array | Equivalent |

APPROVAL AND SIGN-OFF

APPROVAL

Date of Approval by Council: 28 July 2017 Resolution Number: 019/OCM/17

| MM YAWA | DATE |
|-------------------|------|
| MUNICIPAL MANAGER | |

RECOMMENDATION

That the report be noted.

That the Senqu Disaster Recovery Plan as part of the ICT Corporate Governance Framework be approved by Council.
